

Vault³⁶⁵

LocalLock

On-Premises Protection From Cyber-Attacks

In today's hybrid world, not all data lives in the cloud – and Vault365 LocalLock is designed precisely for that reality. Built for organizations that manage sensitive files and folders locally,

LocalLock delivers a fully-managed local appliance, powered by Veeam, in a hardened immutable XFS repository. This ensures your data remains protected, compliant, and instantly accessible – while being impervious to tampering or deletion, even from internal threats.

Why Vault365 LocalLock?

- **Immutability:** Your backups cannot be altered or deleted.
- **Hardened Repository:** Enhanced security against Cyber Threats.
- **Cost Effective:** Secure local backup data immutability.
- **Fully Managed:** The team at Vault365 manage your LocalLock appliance.
- **Powered by Veeam:** Backed by Veeam technology, the leader in Gartner Magic Quadrant.
- **Retention Lock:** Guarantees data retention for compliance and recovery.
- **Fast Recovery:** Get up and running quickly after an incident.
- **Offline Protection:** Unlike cloud-first solutions, LocalLock continues to safeguard data even without an internet connection.
